## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-16 and 24-37 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 1-9 are allowed because prior art fails to teach or make obvious a method minimizing artifacts and total exam time between acquisition in dual or multiple energy imaging comprising applying a first offset image to compensate for charge retention effects in a first data set and applying a second offset image to compensate for charge retention effects in a second image set data as claimed.

Claims 10-16 are allowed because prior art fails to teach or make obvious a system for dual or multiple energy imaging comprising: an image acquisition module applying a first offset image to compensate for a retained charge in a plurality of cells at a predetermined amount of time after a second exposure interval and applying a second offset image to compensate for the retained charge in the plurality of cells at the predetermined amount of time after the first offset image data set is provided as claimed in claim.

Claims 24-29 are allowed because prior art fails to teach or make obvious a method minimizing artifacts and total exam time between acquisition in dual or multiple energy imaging comprising after a first read time and before a second exposure interval changing a pixel acquisition resolution of a detector as claimed.

Claims 30-37 are allowed because prior art fails to teach or make obvious a method minimizing artifacts and total exam time between acquisition in dual or multiple energy imaging comprising after a first read time and before a second exposure interval changing a gain of a detector as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Granfors et al. (US Patent 5,452,338) and Petrick et al. (US Patent 6,404,852 B1) teach the methods and systems for real time offset correction in solid state X-ray detector.
